

METROPOLITAN POLICE DEPARTMENT

INCIDENT REPORT - DEATH INVESTIGATION

Case Number:	MPD-2024-11-28-2456
Incident Type:	Death Investigation - Medical Emergency
Date/Time of Incident:	November 28, 2024, 10:32 hours
Date/Time Reported:	November 28, 2024, 10:32 hours
Location of Incident:	Thompson Manufacturing, 3200 Industrial Parkway
Location of Death:	St. Mary's Hospital Emergency Department
Decedent:	CONFIDENTIAL, 58-year-old Male
Reporting Officer:	Officer T. Williams (#3421)
Supervisor:	Sergeant M. Davis (#1789)
Disposition:	Natural death - No criminal investigation

INCIDENT SUMMARY

On November 28, 2024, at approximately 10:32 hours, emergency services responded to Thompson Manufacturing for a medical emergency. A 58-year-old male employee suddenly collapsed while at work. Despite immediate bystander CPR, EMS response, and aggressive medical treatment at the hospital, the individual was pronounced dead. Investigation revealed no suspicious circumstances, and the death appears to be from natural medical causes. The case has been referred to the Medical Examiner for determination of cause and manner of death.

INITIAL RESPONSE

911 Call and Dispatch

At 10:32 hours, Communications Division received a 911 call from Thompson Manufacturing reporting an employee who had collapsed and was unconscious. The caller (facility manager) reported that CPR was in progress. EMS Paramedic Unit 7 and Engine Company 12 were dispatched

immediately. Police were dispatched per standard protocol for all sudden death/medical emergency calls. Officer Williams arrived on scene at 10:39 hours, shortly after EMS arrival.

Scene Assessment

Upon arrival, Officer Williams observed EMS personnel providing advanced life support to an unconscious adult male in the facility's main floor area. Multiple employees were present, visibly distressed. The scene showed no signs of trauma, altercation, or suspicious circumstances. An automated external defibrillator (AED) was present, having been used by employees prior to EMS arrival.

The victim was transported to St. Mary's Hospital at 10:58 hours with ongoing resuscitation efforts. Officer Williams remained at the scene to gather information and conduct preliminary investigation.

WITNESS STATEMENTS

Primary Witness - David Martinez (Coworker)

Mr. David Martinez (DOB 03/22/1985, employee ID #4739) provided the following statement: He was working near the victim when the incident occurred at approximately 10:30 hours. The victim appeared to be in his normal state of health throughout the morning. Mr. Martinez observed the victim walking from his work area toward the break room. Suddenly, the victim stopped walking, brought his left hand to his chest, and verbalized 'I can't breathe' or words to that effect. The victim then stated something about chest pain. Within seconds, the victim collapsed to the floor, unconscious.

Mr. Martinez immediately called for help and ran to the victim's side. Another employee (Ms. Johnson) called 911 while Mr. Martinez checked for responsiveness and breathing. Finding the victim unresponsive and not breathing normally, Mr. Martinez immediately began chest compressions, as he is trained in CPR through the company's safety program.

Additional Witness - Sarah Johnson (Coworker)

Ms. Sarah Johnson (DOB 08/15/1979, employee ID #3894) corroborated Mr. Martinez's account. She observed the same sequence of events from a different vantage point. She confirmed the victim appeared normal throughout the morning and that the collapse was sudden and unexpected. She called 911 immediately and retrieved the company's AED. The AED was applied and advised shock delivery. One shock was administered before EMS arrival. Ms. Johnson noted the victim had mentioned feeling 'a bit tired' earlier in the morning but otherwise showed no signs of illness.

Facility Manager - Robert Chen

Mr. Robert Chen (DOB 11/03/1972, Facility Manager) stated the victim had been employed at Thompson Manufacturing for 23 years and was a valued, reliable employee. The victim had arrived at work at his normal time (08:00 hours) that morning and appeared to be in his usual health. Mr. Chen was not present when the collapse occurred but responded immediately when alerted. He confirmed that workplace safety protocols were followed, including prompt CPR and AED use. Mr. Chen provided the victim's emergency contact information and employment records.

Additional Employees

Several other employees were interviewed briefly. All provided consistent accounts of the victim appearing normal that morning with no signs of distress prior to the sudden collapse. No one reported any arguments, conflicts, or unusual events involving the victim. All described the victim as friendly, hardworking, and well-liked.

SCENE INVESTIGATION

Physical Scene Description

Thompson Manufacturing is an industrial facility with administrative offices and manufacturing floor areas. The incident occurred in the main manufacturing floor area, approximately 30 feet from the break room entrance. The area was well-lit and clean, with normal working conditions present. No hazards, spills, or safety concerns were identified in the immediate area or elsewhere in the facility.

Evidence and Items Present

No weapons, drugs, or suspicious items were found in the area. The victim's personal effects (wallet, keys, cellular phone) were secured and later released to family. No signs of trauma, altercation, or suspicious circumstances were observed. The facility's AED data log was preserved for medical records. No physical evidence requiring collection was identified.

Environmental Assessment

The facility manager confirmed that no chemical spills, gas leaks, or environmental hazards were present. Air quality, temperature, and ventilation were all normal. The facility's safety officer reviewed recent safety inspections, which showed no violations or concerns. The area where the victim collapsed had no unusual conditions that would contribute to a medical emergency.

HOSPITAL NOTIFICATION

Officer Williams contacted St. Mary's Hospital Emergency Department at 11:52 hours. Hospital staff reported that despite continued resuscitation efforts, the patient was pronounced dead at 11:47 hours. The emergency physician stated that the patient never achieved return of spontaneous circulation and showed no signs of life despite maximum resuscitation efforts. The physician indicated the death appeared to be from natural medical causes, likely cardiac in nature, based on the clinical presentation and course.

BACKGROUND INVESTIGATION

Decedent Information

The decedent was identified through employment records and confirmed by coworkers. Background check revealed no criminal history, no outstanding warrants, and no concerning police contacts. DMV records showed valid driver's license with no significant violations. The decedent lived alone following a divorce several years prior and had two adult children living out of state.

Employment History

According to employer records, the decedent had worked at Thompson Manufacturing for 23 years as a floor supervisor. His employment record showed excellent performance reviews, no disciplinary issues, and no workplace conflicts. Sick leave usage was minimal over the years. He was described by management and coworkers as dedicated, reliable, and well-respected.

Recent Activity

Coworkers reported the decedent had worked his regular schedule in recent weeks with no absences or complaints of illness. He had mentioned being somewhat tired but attributed it to long work hours. No recent conflicts, threats, or concerning incidents were reported. The decedent's routine that morning was unremarkable until the sudden collapse.

NOTIFICATION OF NEXT OF KIN

Emergency contact information from employer records identified the decedent's sister as next of kin. The Medical Examiner's office was responsible for official death notification to family members. The employer provided support services to employees affected by the incident.

CONCLUSIONS AND DISPOSITION

Based on the comprehensive investigation including witness statements, scene assessment, absence of any suspicious circumstances, and information from medical personnel, this incident is classified as a sudden natural death with no evidence of criminal activity. The circumstances are entirely consistent with sudden cardiac death from medical causes.

No evidence of trauma, foul play, toxic exposure, or other external causes was identified. The sudden onset of chest pain followed by collapse is classic presentation for acute cardiac event. Multiple witnesses observed the victim appearing healthy immediately before the sudden medical emergency. The prompt intervention by trained coworkers and rapid EMS response could not prevent the fatal outcome.

This case is referred to the Medical Examiner's office for autopsy and determination of cause and manner of death. No criminal investigation is warranted or ongoing. Case closed pending Medical Examiner findings.
